Day 2: AI Voice, Audio & Music

5-DAY AI MASTERY COURSE — KATHMANDU, NEPAL

DAY 2 OF 5

The Voice

"Today, AI learns to speak, narrate, sing, and podcast — all from text."

Day 1 Recap + Today's Hook

✅ Yesterday You Learned

- **CRAFT Framework** — Context, Role, Action, Format, Tone
- **Prompt evolution** — basic → CRAFT → expert (10x better outputs)
- **Right tool for the right job** — ChatGPT, Gemini, Claude, Perplexity

🎙️ Today: AI Gets a Voice

A 15-second ElevenLabs voiceover opens the session: *"Welcome to the Himalayas. Where ancient temples meet morning fog, and every trail tells a story that's been waiting a thousand years for you."*

That voice? Not human. Made in 10 seconds. No microphone. No voice actor. No studio. Let's show you how.

ElevenLabs – Where to Go, What to Click

ELEVENLABS.IO

Step-by-Step Setup

01

Go to **elevenlabs.io** → Sign up (free tier ≈ 10 min of audio/month)

02

Click **"Text to Speech"** in the left sidebar

03

Pick a voice from the **Voice Library** (or use default "Rachel")

04

Paste your text → Click **"Generate"** → Download the MP3

Key Settings to Know

Stability

Higher = more consistent · Lower = more expressive

Clarity

Higher = cleaner · Lower = more natural/breathy

Speed

Slower for narration · Faster for ad copy

Free tier provides ~10 minutes of audio per month — plenty for demos and experimentation. Nepali and Hindi voices are supported, though English voices are the strongest.

Demo: Travel Narration Voiceover

LIVE DEMO

VOICE: DANIEL · STABILITY 55% · CLARITY 75%

> *"Imagine waking up to the sound of temple bells echoing through the misty streets of Bhaktapur. The ancient city stirs slowly — a potter shapes clay the same way his grandfather did, while the smell of fresh juju dhau drifts from a tiny shop with no sign. This isn't the Nepal you see on postcards. This is the Nepal that stays with you long after you leave. Your journey starts here."*

Select the **"Daniel"** voice — deep, warm narrator. Hit Generate. A voiceover like this costs **NPR 5,000–15,000** from a professional voice actor, plus studio time and revisions. This took 10 seconds. Download the MP3 — you'll layer it with music later.

Voice Variation Demo – 3 Voices, Same Text

"Kathmandu isn't just a city. It's a feeling. The chaos, the colors, the quiet corners where time forgets to move. Come find what you didn't know you were looking for."

🎯 Voice 1 – Josh

Casual & Young

Stability 40% · Clarity 65%

= Instagram Reel energy

🎬 Voice 2 – Arnold

Deep Documentary

Stability 70% · Clarity 80%

= Netflix documentary

🌙 Voice 3 – Charlotte

Soft & Cinematic

Stability 50% · Clarity 85% · Speed -10%

= Luxury hotel ad

Generate all 3 and play them back-to-back. **Same 4 sentences. Three completely different worlds.** The back-to-back contrast is the "wow" moment. Ask the room: *"Which voice would YOU use for your business?"*

QUICK MENTION · 60 SECONDS

Murf AI – The Corporate Alternative

murf.ai — best for corporate training, e-learning, and professional presentations. Ultra-clean, polished voices with built-in video sync — add voiceover directly to slides or video. Free tier available with limited minutes.

ElevenLabs

Creative, emotional, natural-sounding — ads, content, storytelling

Murf AI

Professional, clean, structured — training, courses, corporate

Google AI Studio – Gemini Audio

AISTUDIO.GOOGLE.COM

Why It Matters

- Gemini's **developer playground** — text, audio, image, and video all in one place
- Generates audio responses and processes audio inputs with multimodal flexibility
- Free to use with any Google account — same ecosystem as Gemini chat

Live Demo Prompt

"Create a short, warm welcome message for guests arriving at a boutique hotel in Patan, Nepal. Make it sound like a friendly host greeting them personally. Keep it under 40 words."

Generate the text → feed it into ElevenLabs for voice. This is the **ecosystem connection**: AI Studio generates the words, ElevenLabs gives them a voice. You'll revisit AI Studio on Days 3 and 4 for images and video.

NotebookLM – "Watch This"

NOTEBOOKLM.GOOGLE.COM

GOOGLE'S AI RESEARCH & PODCAST TOOL

> Upload ANY document → AI reads it, understands it, and generates a **full podcast discussion** about it. Two AI hosts discuss YOUR content naturally — with jokes, insights, and genuine back-and-forth.

Upload a Doc

PDF, Google Doc, URL, or pasted text

AI Reads It

Identifies key insights automatically

Get a Podcast

Full episode with two natural-sounding hosts

This is the tool that breaks people's brains — every single time. Ready? Watch.

NotebookLM Demo – Step by Step

📋 Live Demo Steps

01

Go to **notebooklm.google.com** → Click **"New Notebook"**

02

Click **"Add Source"** → Upload a PDF, Google Doc, URL, or paste text directly

03

Use the Nepal Tourism 2025 text as your demo source (paste it in)

04

Click **"Audio Overview"** → Wait 1–2 minutes for generation

📄 Demo Source – Nepal Tourism 2025

Nepal welcomed **1.2 million tourists** in 2024, a 35% increase from 2023. Government target: 2.5 million by 2030. Growth areas: adventure tourism, cultural tourism (UNESCO heritage sites), and emerging wellness tourism in Pokhara and Lumbini.

Challenges include only 3 international-standard airports, limited hotel capacity, and inconsistent trekking-route connectivity. Average tourist spends $45/day vs. Asian average of $65. New 150-day digital nomad visas and 200% growth in rural homestay programs since 2022 — creating income for 5,000+ rural families.

Pre-upload the source text before class begins. Have a pre-generated podcast saved as a backup in case generation is slow during the live demo.

NotebookLM Use Cases

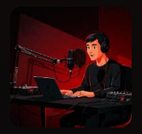

🎓 Student

Upload a textbook chapter or lecture notes PDF → get a **study podcast** you can listen to while commuting. Your own personal audio tutor.

💼 Professional

Upload meeting notes, project briefs, or reports → get an **audio summary** your team can absorb in 5 minutes — no reading required.

📱 Content Creator

Upload your blog post or research → get a **podcast episode** from existing written content. Repurpose with zero extra effort.

🏢 Business Owner

Upload your business plan or market research → get an **audio explainer** to share with investors and partners who'll actually listen.

Pro move: Upload multiple sources → NotebookLM connects insights ACROSS documents. Upload 3 competitor websites and get a competitive analysis podcast.

Suno AI – Text to Music in Seconds

SUNO.COM

50 CREDITS/DAY = ~10 SONGS FREE

01

Go to **suno.com** → Sign up free (50 credits/day)

02

Click **"Create"** → Toggle **"Custom"** mode ON for full control

03

Fill in **Description/Style** (genre, mood, instruments, tempo) + optional lyrics

04

Click **"Create"** → Wait 30 seconds → Full song generated, royalty-free

The Description field is where your **prompt engineering from Day 1 pays off**. The more specific your description, the better the music. We're creating 3 completely different tracks in the next few minutes — ready?

🎵 Music Demo 1: Chill / Ambient

TRACK 1 | 🌙 Lo-fi Background Music

Suno AI Prompt

"Chill lo-fi hip hop, warm analog feel, soft piano melody over dusty vinyl drum beats, gentle bass, ambient rain texture in the background, relaxing and nostalgic mood, perfect for studying or working in a cozy Kathmandu café, 90 BPM, instrumental only, no vocals"

Title: Café in the Clouds · **Lyrics:** Leave blank

Why This Prompt Works

- **Genre declared:** Lo-fi hip hop — sets the entire sonic palette
- **Instruments specified:** Piano, drum beats, bass, rain texture
- **Tempo locked:** 90 BPM — keeps it relaxed, not sluggish
- **Constraints clear:** "No vocals" prevents unwanted singing

This track is **royalty-free**. You made it. Use it in YouTube videos, café playlists, Instagram Reels — no licensing fees ever.

🎵 Music Demo 2: Energetic / Upbeat

TRACK 2 | Energetic Promo Music

Suno AI Prompt

"Upbeat energetic pop rock, driving electric guitar riff, punchy drums with strong kick and snare, clapping rhythm, motivational and powerful, perfect for a product launch video or YouTube intro, 130 BPM, building energy with a big chorus drop, instrumental only, no vocals"

Title: Launch Day · **Lyrics:** Leave blank

The Contrast Is the Lesson

Same tool. Same process. **Completely different energy.**

Track 1

90 BPM · Relaxed · Café energy

Track 2

130 BPM · Driving · Launch energy

Tempo is a powerful lever — always specify it. A Track 1 or Track 2 on a stock music site costs **NPR 3,000–8,000** each. You just made both for free.

🎵 Music Demo 3: Cinematic / Dramatic

TRACK 3 | 🎬 Epic Cinematic Score

> *"Epic cinematic orchestral, sweeping strings building from soft to powerful, deep brass horns, thundering timpani drums, ethereal choir in the background, emotional and awe-inspiring, like a documentary about Mount Everest or ancient Himalayan kingdoms, slow build to a majestic crescendo, 70 BPM building to 100 BPM, instrumental only, no vocals"*

Title: Kingdom in the Sky · **Lyrics:** Leave blank

Let the buildup section play. Let the crescendo hit. Don't talk over it. **"This is Hans Zimmer energy. From a text prompt. For free."**

Think ahead: You now have a voiceover tool AND a music tool. What happens when you combine them? We'll do exactly that in a few minutes — and on Day 4, you'll add video to this stack.

🎵 The Music Prompt Formula

Genre

Lo-fi hip hop, cinematic, folk fusion

Instruments

Piano, tabla, sarangi, synth

Mood & Tempo

Peaceful/60–80, Energetic/120–140

Purpose & Constraints

YouTube intro/under 60s, instrumental only

Same logic as the CRAFT Framework — the more specific your description, the better the output. 🇳🇵 Nepali touch: Try *"Nepali folk fusion with madal drums, sarangi, and bansuri flute over modern electronic beats"* for something truly unique. Save this formula — you'll use it for tonight's homework.

The Audio Stack: Voice + Music = Professional

🎙️ + 🎵 = 🔥

Script

ChatGPT — Day 1

Voiceover

ElevenLabs — today

Background Music

Suno AI — today

Layer Together

CapCut free — music at 20%, voice at 100%

Play the pre-made 30-second Nepali travel ad: **Bhaktapur voiceover (ElevenLabs)** layered over the **chill lo-fi track (Suno)**. This is what brands pay **NPR 25,000–50,000** for — voice actor, musician, sound engineer, studio time. You just did it with 3 free tools.

On Days 4 and 5, we add images and video to this stack. Full production pipeline. Zero budget.

Your Turn 🎙️ – Create a Voiceover

⏰ 5 Minutes · Everyone Participates

Text to Paste into ElevenLabs

"There's a place where the mountains touch the sky and the rivers remember ancient songs. Where every sunrise paints the Himalayas in colors that no camera can truly capture. This is Nepal. And this is your invitation to experience something real."

Instructions

01

Go to **elevenlabs.io** → Text to Speech

02

Paste the text on the left

03

Pick ANY voice from the library

04

Adjust one setting (stability or clarity)

05

Generate → Listen → Download

🏆 **Play your voiceover for the person next to you. Best one gets a shoutout!**

Practical Applications – Where to Use This

YouTube Voiceover

Narrate videos without showing your face. **Tools:** ElevenLabs + Suno. YouTubers pay NPR 3K–10K per video for a voice actor. Now: free.

Podcast from Blog

Turn written content into audio instantly. **Tool:** NotebookLM. Content creators repurpose existing work with zero extra recording time.

Product Ad Audio

Professional-quality radio and social ads. **Tools:** ChatGPT + ElevenLabs + Suno. Brands pay NPR 15K–40K for audio ads. Now: free.

E-Learning Narration

Course content with a professional voice. **Tools:** ElevenLabs or Murf. Course creators pay NPR 500–1,500 per module. Now: free.

> **"You now have skills that people pay for. Remember that."** — On Day 5, we'll talk about how to turn these skills into income.

Common Mistakes + Pro Tips

❌ Common Mistakes to Avoid

Using the Default Voice

Browse the library — the right voice changes everything. Never settle for "Rachel" without exploring.

Vague Music Prompts

"Make happy music" gives generic output. Always specify genre, instruments, mood, and tempo.

Wrong Voiceover Speed

Slow down for narration. Speed up for ads. Match the pace to the emotion of the content.

✅ Pro Tips

Voice Cloning

ElevenLabs lets you clone your OWN voice — upload just 1 minute of audio. Create content in your voice without ever recording again. *Only clone voices you have permission to use.*

Suno "Extend" Trick

Generate a 30-second clip, then click **"Extend"** to build it into a 2–3 minute full track.

Stack NotebookLM Sources

Upload 3–5 related documents for richer, deeper podcast conversations with cross-document insights.

📝 Day 2 Homework – Do This Tonight

⏰ 45–60 minutes

SAVE EVERYTHING — YOU'LL NEED THESE FILES ON DAYS 4 & 5

1

3 Voiceovers in ElevenLabs

① A business/product ad (write the script using CRAFT from Day 1)
② A YouTube-style narration
③ One experimenting with a completely different voice or style

Save all 3 MP3s.

2

3 Music Tracks in Suno AI

① A chill/ambient track
② An energetic/upbeat track
③ One with **Nepali instruments or fusion style** — use the Music Prompt Formula

Save all 3 audio files.

3

1 NotebookLM Podcast

Upload something *you* care about — your thesis, a report, an article, your business plan. Listen to the full generated podcast. Share your reaction in the group chat.

4

🌟 BONUS – Combination Test

Layer one voiceover + one music track in **CapCut (free)** or any editor. Music at 15–20% volume, voice at 100%. Save the combined audio — you'll use it on Days 4 & 5.

Create a folder: **"AI Course Outputs."** Put everything there. Your homework tonight creates the audio assets for your final project — don't skip it.

Tomorrow: AI Image Generation 🖼️

DAY 3 OF 5 | THE EYES

Studio-Quality Product Photos

No camera needed — AI generates photorealistic product shots

5 Art Styles, 1 Subject

Same subject rendered in watercolor, sketch, photorealism, cinematic & more

Social Media Graphics

Thumbnails, portraits, banners — all from a text prompt

Gemini vs. ChatGPT

Imagen 3 vs. DALL·E — head-to-head image quality comparison

> "Tomorrow, AI opens its eyes. And Imagen 3... is something else. If today's voice quality surprised you, wait until you see what Imagen 3 produces. It doesn't look AI-generated. See you then."
