Day 1: Prompt Engineering & AI Tools

5-DAY AI MASTERY COURSE — KATHMANDU, NEPAL

The quality of your AI output = The quality of your input

By Day 5, You'll Create All of This

🖼️ AI Product Photo

A stunning Nepali tea brand product shot — no camera, no Photoshop, no studio.

🎙️ AI Voiceover

A professional Nepali travel ad voiceover using ElevenLabs — sounds 100% human.

🎬 AI Video

A cinematic drone shot over Pokhara lake with text overlays — made with Veo 3 from a single text prompt.

> *"No Photoshop. No recording studio. No camera. No editing skills. 5 days. All free or near-free tools. Let's start."*

The C.R.A.F.T. Framework

Most people type one vague sentence into ChatGPT and wonder why the output is useless. CRAFT is a 5-part formula that transforms any prompt from generic to genius. You don't need all five every time — but the more you include, the better your output.

1

Context

Background & situation

"I run a 10-room hotel in Thamel"

2

Role

Who should AI be?

"Act as a hospitality marketing expert"

3

Action

What exactly to do

"Write 5 Instagram captions"

4

Format

How to structure output

"Each caption: hook + body + 3 hashtags"

5

Tone

Voice & style

"Friendly, adventurous, targeting backpackers"

"More context in → Better output out. Always." C and R are the biggest unlocks — most people skip them entirely.

❌ The Bad Prompt

This is what **95% of users** type when they open ChatGPT. The result? Something so generic it could belong to any business, in any city, in any industry.

The Prompt

```
Write a marketing email for my business
```

What You Get

- Generic — could apply to ANY business anywhere on Earth
- No personality, no specifics, no local flavor
- You'd never actually send this to a real customer
- A perfect example of: **garbage in, garbage out**

Same task. Same AI. Watch what happens when we apply CRAFT on the next slide.

✅ The CRAFT Prompt – Same Task

The CRAFT-Powered Prompt

```
Context: I own "Himalayan Brews," a specialty Nepali coffee
brand in Kathmandu. We just launched a new single-origin bean
from Gulmi district. Our customers are urban Nepali
professionals aged 25-40 who care about supporting local
farmers.
Role: Act as a direct-response email copywriter who specializes
in premium food & beverage brands.
Action: Write a product launch email that announces our Gulmi
single-origin bean, tells the farmer's story, and drives online
orders.
Format:
- Subject line (under 50 characters)
- Preview text (under 90 characters)
- Email body: hook → farmer story → product details → CTA
- Keep total email under 200 words
Tone: Warm, proud, locally-rooted. Like a friend genuinely
excited to share something special. No corporate speak.
```

Why This Works

Look at the specific wins the AI delivers when you give it real context:

- Mentions **Gulmi district** by name
- Weaves in the **farmer's story**
- Hits the **word count constraint**
- Writes a subject line you'd **actually open**
- Matches the **exact tone** specified

Same AI. Same task. The ONLY difference was the prompt. That's the skill we're building today.

PROMPT EVOLUTION

Level 1

The Beginner Prompt

This is where most people start — and unfortunately, where many people stay.

The Prompt

```
Give me a social media strategy
```

What the AI Returns

- A vague, generic 5-point list
- Could apply to any business on Earth
- No platform specified, no audience, no goal
- No business context whatsoever
- Completely useless in the real world

Would you pay a consultant for this output? No. This is how most people use AI. Let's go to Level 2.

PROMPT EVOLUTION

Level 2 – CRAFT Framework Applied

The CRAFT Prompt – Bean & Basin Café, Jhamsikhel

```
Context: I own a small café called "Bean & Basin" in Jhamsikhel,
Lalitpur. We serve specialty coffee and Nepali fusion brunch.
Average customer: 22-35, works in tech/creative fields,
discovers us through Instagram. We have 1,200 followers and want
to reach 5,000 in 3 months.
Role: Act as a social media strategist who has grown 50+ small
food businesses on Instagram in South Asia.
Action: Create a 4-week Instagram content strategy with specific
post ideas, posting times for Nepal audience, and hashtag
groups.
Format: Week-by-week table. Each week: 5 post ideas with caption
hooks, best posting time, content type (reel/carousel/story),
and 5 relevant hashtags.
Tone: Trendy but authentic. Not try-hard. Think: "cool Nepali
friend who knows good food."
```

What You Get Now

- Nepal-specific optimal posting times
- Local and niche hashtag suggestions
- Actual, usable post ideas — not generic platitudes
- A strategy you could hand to your social media person **today**

Notice how specific the AI got — it knows the business, the city, the audience, and the follower goal. The output quality jumps dramatically.

PROMPT EVOLUTION

🔵 Level 3 — Expert with Chain-of-Thought + Constraints

This is a consulting-level prompt. It uses Context, Role, a step-by-step Action chain, per-section Format instructions, Tone, AND hard constraints. The output? Worth NPR 50,000 from a strategy firm. Free from ChatGPT.

```
Context: I own "Bean & Basin," specialty coffee + Nepali fusion brunch café in Jhamsikhel, Lalitpur. 1,200 Instagram followers, goal: 5,000 in 3 months. Average customer: 22-35, tech/creative professionals. Top-selling items: Yak cheese toast (NPR 450), Lavender latte (NPR 380), Weekend brunch plate (NPR 650). Zero ad budget — organic growth only. Competitive advantage: only café in Lalitpur doing Nepali-ingredient fusion with specialty coffee.
Role: Social media growth strategist who has scaled 50+ South Asian food businesses from under 2K to 10K+ followers using only organic strategies. You understand Nepali consumer behavior and Instagram's 2025 algorithm.
Action: Think step by step.
Step 1: Identify 3 strongest content pillars based on menu and positioning.
Step 2: Create a 4-week Instagram content calendar.
Step 3: Write 3 ready-to-post Reels scripts (under 30 seconds each) designed to go viral locally.
Step 4: Give me a "growth hack" checklist — 10 things to do daily/weekly that cost nothing.
Format: Pillars: bullet points with reasoning | Calendar: table (Day | Content Type | Topic | Caption Hook | Hashtags) | Reels: scene-by-scene with on-screen text + voiceover | Checklist: numbered with time estimate per task.
Tone: Strategic but practical. Like a mentor who gives you the playbook, not theory. Use Nepali cultural references where relevant.
Constraints: No paid ads. No influencer collaborations over NPR 5,000. All strategies must work for a 2-person team. Prioritize Reels and Stories
```

"3 prompts. Same topic. Completely different quality. The AI didn't get smarter — YOU got smarter."

⚔️ Tool Battle: Same Prompt, 3 AIs

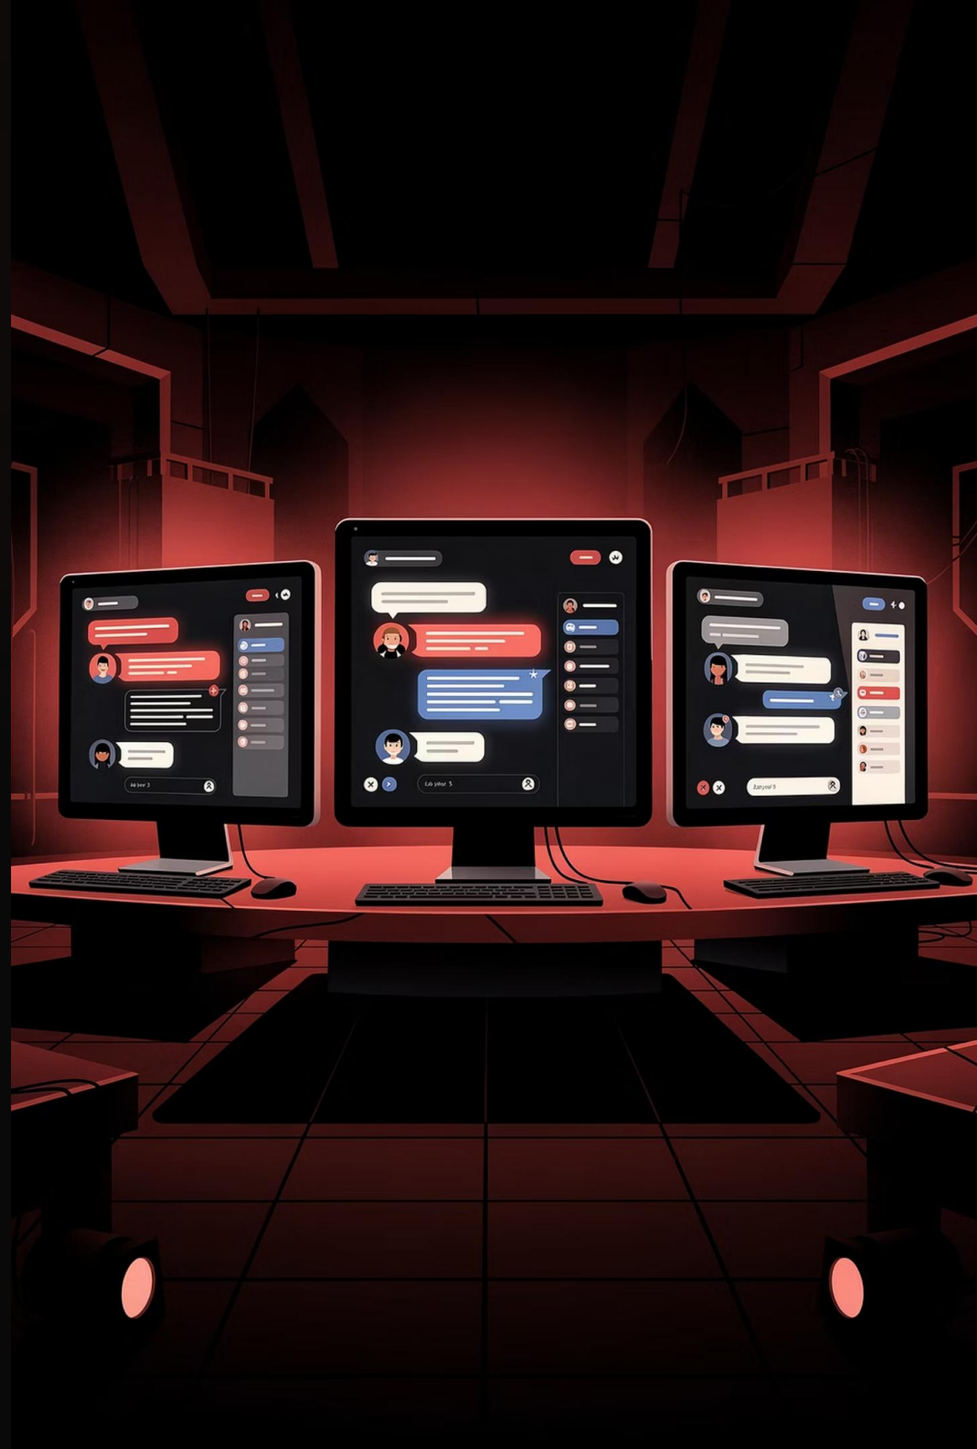

ChatGPT vs Gemini vs Claude – Which One Wins?

The Rules

- Exact same prompt in all 3 tools
- Hit Enter roughly simultaneously
- Compare side by side in real time

What We're Judging

- ⚡ Speed to first response
- 📝 Writing quality & depth
- 🎯 Nepal relevance & specificity
- 📊 Formatting & scannability

💻 The Battle Prompt — Paste in All 3

This is a real-world business scenario: launching a specialty tea café in Bouddha, Kathmandu. Paste this simultaneously into ChatGPT, Gemini, and Claude — then watch the differences unfold.

```
Context: I'm opening a specialty tea café called "Chiya Chautari" in Bouddha, Kathmandu — a neighborhood with heavy tourist foot traffic and a growing local professional crowd. I have NPR 5 lakh budget for my first 3 months of marketing. I want to be known as THE place for premium Nepali tea experiences (not just another café).
Role: Act as a local business marketing strategist who has launched 20+ food & beverage businesses in South Asian tourist hubs.
Action: Create a complete 90-day launch marketing plan with 3 phases: Pre-launch buzz (Day 1-15), Grand opening (Day 16-30), and Sustain & grow (Day 31-90).
Format: For each phase, give me:
- Goal for that phase
- 5 specific tactics with estimated cost in NPR
- Content ideas (3 per phase)
- One "guerrilla marketing" idea that costs under NPR 5,000 but creates buzz
- KPIs to track
Tone: Practical, street-smart, like a mentor who's done this before in Nepal specifically.
```

Pay special attention to the **guerrilla marketing idea** from each tool — which is the most creative and most Nepal-relevant?

🔍 Perplexity AI – Research with Sources

Google gives you 10 blue links. Perplexity gives you **the answer** — with cited sources, synthesized in seconds. For market research, fact-checking, and competitive analysis, it's a game-changer.

Live Demo Prompt

```
What are the most popular tourist areas in Kathmandu for opening a food business in 2025? Include foot traffic data, rent estimates in NPR, and competition density.
```

What Makes It Different

- Pulls from **real, live websites** — not hallucinated data
- Every answer includes **clickable source links**
- Synthesizes information into a clean, readable answer
- Suggests follow-up questions to dig deeper

Explore tonight: Try the same question in Google, then in Perplexity. The difference is immediately obvious. Perplexity is your go-to for research that needs to be trustworthy.

RAPID-FIRE DEMOS | 1 OF 4

🎭 Use Case: Research & Market Analysis

Demo Prompt — Trekking Gear Business in Thamel

```
I'm considering starting a trekking gear rental business in Thamel,
Kathmandu.

Act as a market research analyst. Give me:
1. Top 5 most-rented trekking items by tourists in Nepal
2. Estimated rental price range for each (in NPR)
3. 3 biggest competitors already doing this in Thamel
4. The gap in the market nobody is filling
5. Startup cost estimate for a small 200 sq ft shop

Format as a brief market report with bullet points. Be specific to
Nepal, not generic.
```

Why This Matters

The output gives you:

- Specific **NPR price ranges**
- Named competitor types in Thamel
- A real, identified **market gap**
- Actionable startup cost estimate

This kind of research used to take **2 days and NPR 20,000** from a consultant. You just did it in 15 seconds.

RAPID-FIRE DEMOS 2 OF 4

✍️ Use Case: Professional Writing

Demo Prompt – Business Proposal (Paste into Claude)

```
Context: I run a small web development agency in Kathmandu. A potential
client (a mid-size Nepali bank) asked for a proposal but I've never written
one before.
Role: Act as a business development consultant who has written 100+ winning
proposals for IT companies.
Action: Write a professional project proposal for building the bank's new
customer portal. Project: 3 months, NPR 15 lakh.
Format:
- Cover page text
- Executive summary (100 words)
- Scope of work (5 deliverables)
- Timeline (3 phases)
- Investment breakdown table
- Why choose us (3 points)
- Next steps
Tone: Professional, confident, but not arrogant. Should feel trustworthy.
```

The Output

- A complete proposal **ready to put on letterhead**
- Professionally formatted investment table
- Scope of work you can actually deliver
- A tone that builds trust with a bank client

Use Claude for this — it consistently produces the best long-form writing quality among all AI tools.

AI doesn't replace your expertise. It handles the writing so you can focus on the **actual work**.

RAPID-FIRE DEMOS 3 OF 4

💡 Use Case: Business Ideation

Demo Prompt – Side Business Ideas in Kathmandu (Paste into ChatGPT)

```
I have NPR 2 lakh to invest, strong social media skills, and I live
in Kathmandu. I can dedicate 3 hours per day to a side business.

Act as a startup advisor who specializes in low-capital businesses
in South Asian cities.

Give me 7 realistic side business ideas that:
- Can start within 2 weeks
- Don't require a physical shop
- Can generate NPR 30,000-50,000/month within 60 days
- Leverage AI tools as a competitive advantage

For each idea: one-line concept, startup cost, how AI helps, first
3 steps to start.
Format: Numbered list, keep each idea under 60 words.
```

What Makes This Prompt Smart

- Hard constraints (**NPR 2 lakh, 3 hours/day**) keep ideas realistic
- Specifying "no physical shop" cuts irrelevant suggestions
- "Leverage AI tools" connects ideas to this week's learning
- Word limit per idea forces conciseness

Try this tonight with **your own constraints** — your skills, your budget, your city. The more specific you are, the more useful the ideas.

✍️ Your Turn: Write a CRAFT Prompt

5 Minutes. Real Use Case. GO.

🏢 Your Business / Job

Something you actually need right now — a proposal, email, strategy, or plan.

📱 Your Content

A real post, Reel script, or caption you'd actually publish this week.

📚 Your Learning

Something you've been trying to understand — a concept, skill, or topic.

💡 A Side Hustle

An idea you've been sitting on — finally get a real strategy for it.

The Rules

- Must include at least **C + R + A + F** from CRAFT
- Must be **specific to YOUR situation** — not generic
- Paste it into ChatGPT or Gemini and **run it**
- ⏰ You have **5 minutes** — timer is live

🏆 **Best prompt gets a shoutout.** Push yourself — the more specific your prompt, the better your output, and the more the room learns from it.

⚡ Common Mistakes + Pro Tips

❌ Common Prompt Mistakes

→ Too Vague

"Write something good" — good for WHO? In what context? For what goal?

→ No Context

AI doesn't know your business, your audience, or your constraints unless you say so.

→ Accepting First Output

Always iterate at least once. The first output is the floor, not the ceiling.

→ One Mega-Prompt for Everything

Break complex tasks into steps. Chain prompting beats cramming it all into one message.

✅ Pro Tips That Change Everything

Start Conversations, Not Commands

"Let's work together on..." consistently gets better results than a single instruction.

Save Your Best Prompts

Build a personal prompt library in a Google Doc. In 30 days, you'll have a goldmine worth thousands of NPR in saved time.

Fix the Prompt, Not the Tool

When output is bad, the instinct is to blame the AI. 90% of the time, the prompt is the problem.

🌐 The Gemini Ecosystem – One Platform, Every Tool

Instead of juggling 10 different subscriptions across 10 different platforms, Gemini brings everything under one roof. You'll use each of these tools across the next 5 days.

1

Gemini Chat

Text, strategy, writing, and research — everything we used today.

2

Imagen 3

Photo-realistic AI image generation — product shots, branding, visuals. **Day 3.**

3

Veo 3

AI video generation — cinematic drone shots, product videos, social content. **Day 4.**

4

Google AI Studio

Voice, audio, and experimental AI models — including voice cloning workflows. **Day 2.**

5

Gemini Deep Research

Long-form analysis with live sources — like having a research analyst on call.

💬 **Student tip:** Gemini Ultra has a student discount — ask during the break if you're interested in exploring the full ecosystem.

📝 Homework – Do This Tonight

The class is the demo. The homework is where the real skill gets built. This is non-negotiable if you want results by Day 5.

1

Write 15 CRAFT Prompts

Save all of them in a Google Doc — this is your prompt library.

- 5 for your work or business
- 5 for content creation
- 5 for personal learning or research

2

Tool Comparison Test

Take your best prompt from today → run it in ChatGPT, Gemini, AND Claude. Screenshot all 3 outputs. Write 2 sentences: which won and why? Bring it to class tomorrow.

⏰ This should take **45–60 minutes.** Start your prompt library TONIGHT — by Day 5, it will be the most valuable document you own. Share interesting outputs in the class WhatsApp/Telegram group!

COMING UP NEXT

DAY 2 OF 5

Tomorrow: AI Voice, Audio & Music

The Voice

AI Voiceover with ElevenLabs

Clone a voice, create a professional travel ad, or narrate your content — sounds 100% human. You'll build one live in class.

Custom Music with Suno AI

Generate original music tracks in any mood, genre, or style — from a single text description. No instruments required.

AI Podcast with NotebookLM

Upload a document — get back a full AI-generated podcast discussion about it. Ideal for turning research into digestible audio content.

"If today blew your mind, tomorrow is going to break it. Bring headphones. Day 1 is done — you're already ahead of 95% of AI users. See you then."
